

Audioworx

Advanced Voice Management Systems

Audioworxs

Audioworxs is an advanced digital recorder dictation and voice document management system. Configurations include Standalone, LAN, WAN or Internet based access. It is designed as a modular enterprise wide system with no practical limits allowing you to customize a system to your unique requirements.

Powerful System Manager Interface

The Audioworxs System Manager Interface is best described as the window through which users are administered and workflow monitored.

With Audioworxs' built-in Administrative tools it is easy to stay in control. These features aid workflow management and allow work priorities to be changed easily and quickly.

Audioworxs can reliably meet any organization's needs. It's success lies in its sophisticated management features providing accuracy and efficiency.

Users are configured for one or more roles: author, listen-only, transcriptionist, editor, or administrator. All user and profile management is available locally or remotely via the Internet.
